

Agile Materials & Technologies, Inc. and Paratek Microwave, Inc. Settle Patent Litigation

Santa Barbara, California and Columbia, Maryland - February 2, 2006 – Agile Materials & Technologies, Inc. (“Agile”) and Paratek announced that they have reached a settlement agreement on all litigation between the two parties. Pursuant to the agreement, the parties are dismissing their claims against each other with prejudice. The terms of the settlement are confidential.

About Paratek

Paratek designs and manufactures adaptive RF front-end component solutions for mobile wireless applications requiring multi-mode and multi-band operation. Paratek’s product offerings cover four major applications including adaptive impedance matching modules (AIMM), high efficiency tunable power amplifiers, antenna tuner products, and broadband pre-selectors and RF front-ends.

At the core of all Paratek products is ParaScan™, a proprietary tunable materials technology coupled with integrated “self-correcting” control solutions. The use of adaptive impedance technology simultaneously improves power amplifier efficiency and linearity, signal link margin, antenna size, and battery life by optimizing RF power transfer throughout the system under all modulation protocols. These products also incorporate Paratek’s 3-D miniaturization technology called ParaStak™, which enables best-in-class footprint reduction.

Paratek is a privately held company headquartered in Columbia, MD, with offices in Nashua, NH and Crystal Lake, IL.
